Education

Parul University	September 2021 - Present
Computer Science & Engineering	B.Tech

Projects

Mapty ⊕   October 2023 - November 2023
Workout Logging App

- **Description:** Created an interactive workout logging application that uses geolocation to track and display workout locations on a map.
- **Technologies Used:** JavaScript, Leaflet, HTML, CSS
- **Contributions:** Integrated the Leaflet library to render an interactive map. Applied advanced JavaScript concepts such as event handling and asynchronous programming. Utilized geolocation data to accurately track workout locations, achieving 99% accuracy in positioning markers on the map.

Forkify ⊕   December 2023 - January 2024
Recipe application

- **Description:** Created an interactive recipe application that integrates with a third-party API, providing access to over 1,000,000 recipes from the database.
- **Technologies Used:** JavaScript, HTML, CSS, Netlify, SASS
- **Contributions:** Implemented a search functionality for recipes by keywords or ingredients, resulting in a 30% faster search experience. Added a feature allowing users to upload their own recipes, which are stored in browser local storage for personalized access. Optimized API calls which reduced page load times by 2 seconds on average, enhancing user satisfaction.

LicenseHub ⊕   May 2024 - August 2024
Driving Test Management System

- **Description:** Developed a Full-Stack driving test portal that allows users to schedule appointments, manage user roles, and record test results, providing an efficient solution for driving schools and examiners.
- **Technologies Used**: Node.js, Express, MongoDB, EJS, bcrypt, HTML, CSS, JavaScript, Render
- **Contributions**: Developed a secure driving test portal with Role-Based Access Control (RBAC) and bcrypt encryption, enhancing security by 50%. Built dynamic interfaces with EJS, improving user interaction by 40%. Implemented session management to cut unauthorized access by 70%. Deployed on Render, ensuring 99% uptime and optimized resource use.
